

WHICH PLIERS FOR WHICH USES?

By : Perles & Co

In the field of jewelry design, it is essential to have the right tools. And pliers are one of them. Designers know that they are essential at each stage of manufacture, even the most basic.

However, there are as many pliers as there are uses. There are pliers that cut, those that clamp, those that shape, those that crush... It's hard to know which pliers to use, especially when you are a beginner.

To help you, we have prepared an overview of the main pliers that are used and their functions.

1. The pliers for rings

Name	Appearance	Use
<u>Pliers for double rings</u>		It helps you to open easily the double rings without deforming them.
