

## HOW TO CHOOSE YOUR CLAY GUN

By : Perles & Co

An extruder or clay gun is used to create different shapes with polymer clay and their disks which are included: hair, grass, flower centers dough sheets, letters using geometric tips, discs ..

For polymers clay amateur and professionnal : we will try to answer one of your great questions.  
Which extruder choose and what are their differences?

Karine Barrera alias Akak, tested 3 extruder during 6 Month.

The Walnut Hollow Extruder and the fimo professionnal one

These two extruders are almost similar.

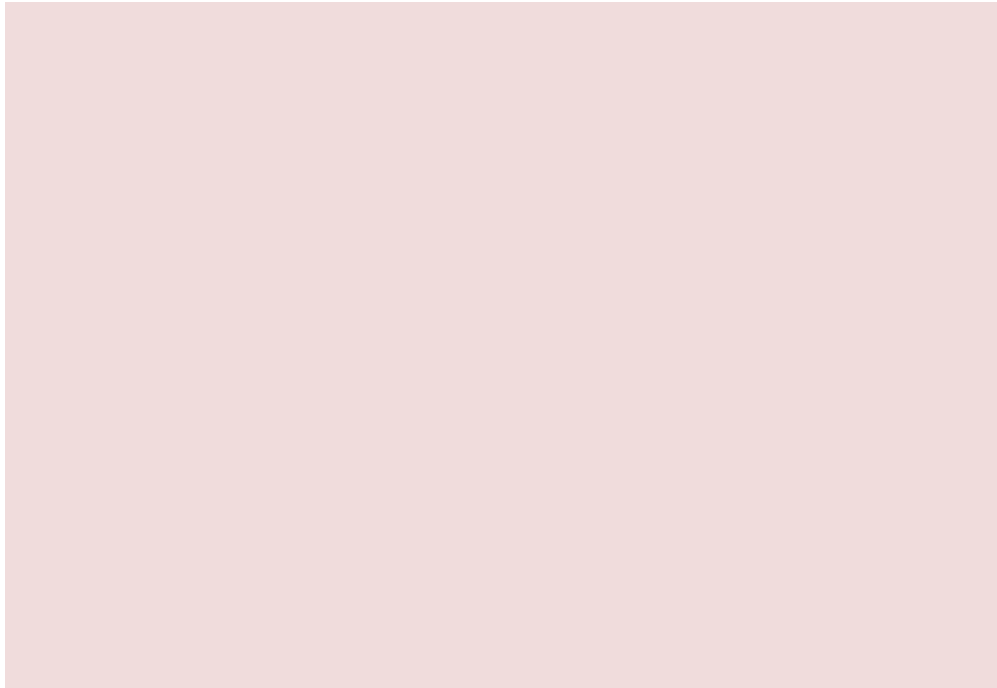

the storage

The display boxes are almost identical.

The discs are placed flat in small plastic cases.

As soon as you open the box and remove the first plastic , the disk tend to be ejected everywhere. You have to organize the drives.

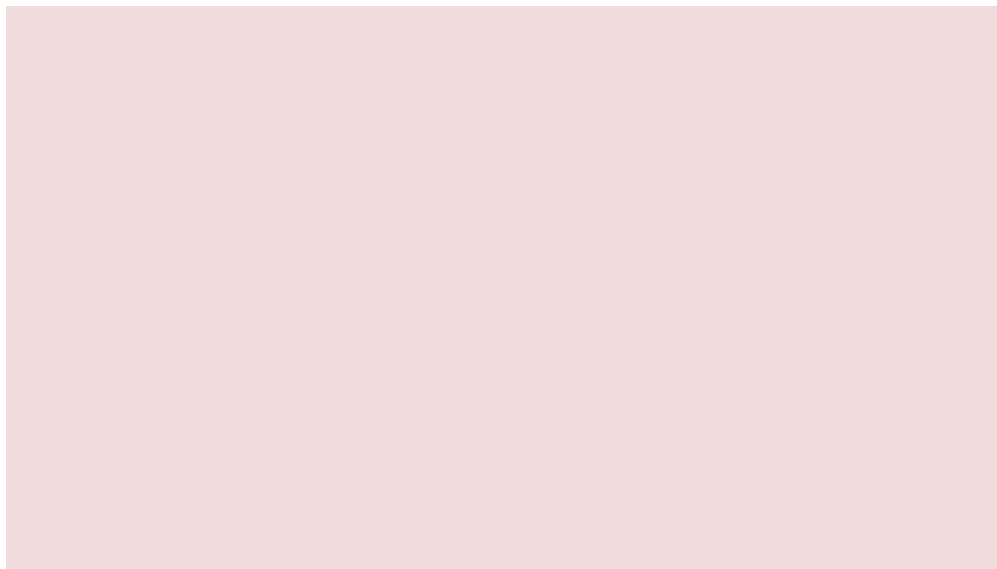

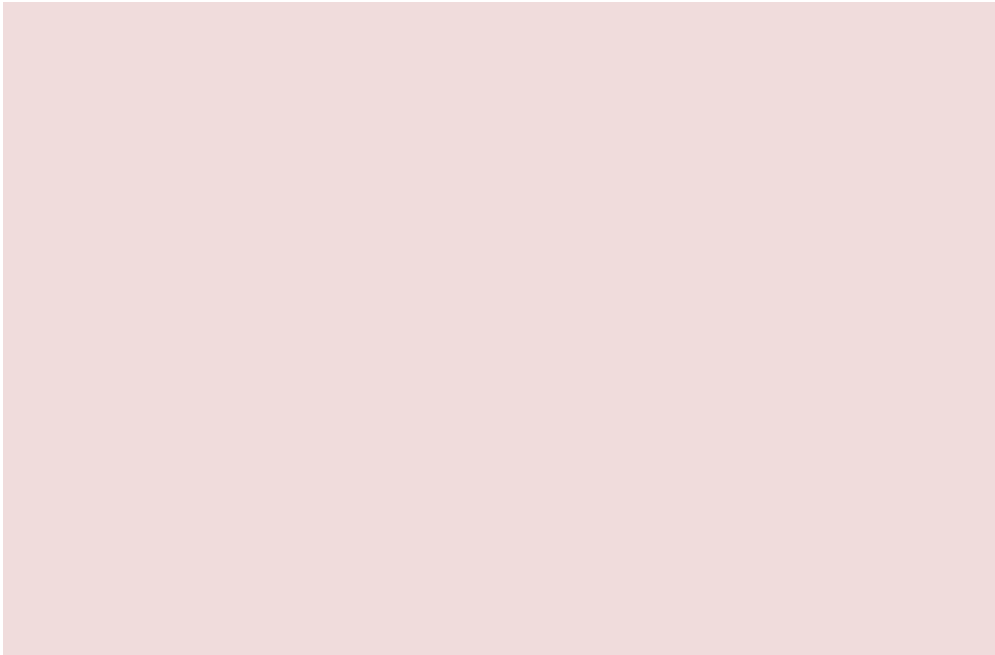

#### Use

Both Guns work well, both children and seniors can use them without great effort and many times.  
Extruders are silent, we do not feel the cylinder too much heat because it is protected by a plastic or silicone.

#### Project success

You can have a very good result if you heat well the polymer clay before using it.  
If the dough hasn't been worked enough , the edges of the outgoing clay won't be sharp enough .

These extruders are well and are adapted for making this activity time to time. But to use them, you will have to help children and the elderly people.

The Makin's Clay Professionnal

#### Storage

There is a storage box with a place for the extruder. There are also small plastic plates to slip into slots inside the box to organize the disk storage.

We can remove all plastic film too and close the box without anything mixes: it is very professional and tidy!

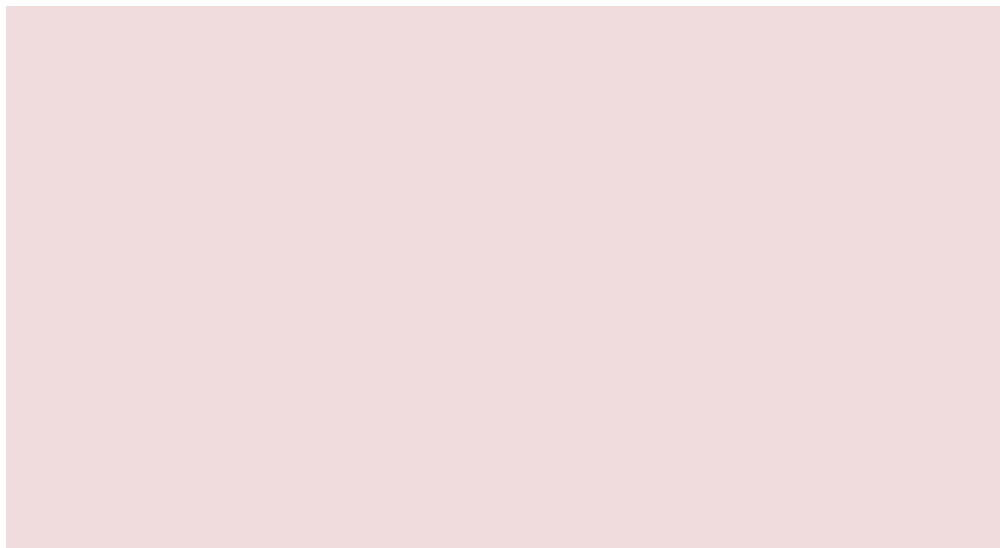

#### Use

This extruder suitable for every one. The force for extruding is small, the apparatus is silent.

#### Project success

This is the most powerful extruder. It requires less effort to warm the dough and get a smooth result.

This is the Rolls Royce of extruders.  
Suitable for every one , easy use and good stability over time.
