

LEARN TO CREATE A BLACK MARBLE EFFECT IN POLYMER

By : Perles & Co

Step 1: Take 2 bars of your black Fimo bread and 2 other bars of Cernit nature granite.
Mix them to obtain a homogeneous color.

Step 2: Pass your mixture through a wide notch dough machine. (if you prefer you can use a roller , but your plate may be less regular).
Use the embosser to cook only the surface of the dough, positioning yourself 3-4 cm above the dough. Stay about 15 seconds per zone to cook.
Be careful not to stay too long and not cook all of the dough.
Hand stretch your plate to crack it.

Step 3: Cover your cracked plate with white acrylic paint . Wipe off the paste immediately so that the paint only remains in the cracks.

Tutorial's steps

★ Step 1/3

Take 2 bars of your black Fimo bread and 2 other bars of Cernit nature granit.
Mix them to obtain a homogeneous color.

★ Step 2/3

Run your mixture through the dough machine on the wide side. (If you prefer, you can use a rolling pin, but your sheet will be less even).
Use the embosser to bake only the surface of the dough, positioning yourself 3-4 cm above the dough. Stay for about 15 seconds per baking area.
Be careful not to stay too long and bake the entire dough.
Stretch your baking sheet by hand to make it crack.

★ Step 3/3

Cover your cracked plate with white acrylic paint. Wipe off the paste immediately so that the paint only stays in the cracks.
