

3D FISH POCKET IN RESIN

By : Karine Barrera

Easy

5h

Create an original empty pocket with a bowl, epoxy resin , 3 D effect stickers, goldfish and all their aquatic universe. Like the great Japanese artist Riusuke who makes wonderful little fish effect 3 D with paint we can now embark on this style of realization without being a painter with these stickers.

Step 1

Prepare your mixture of the 2 components of the epoxy resin by putting first a dose of hardener then 2 doses of resin. Mix well, empty the resin into a new container to make sure of your mixing. Wait until there are no more bubbles to pour a first dose of resin to line the bottom of the bowl. Immediately put the remaining resin in the freezer.

2nd step

The next day, take the resin out of the freezer about an hour in advance. Place some fish and water lily stickers on the already catalyzed resin surface. Each fish sticker works by 3, one sticks a first, others of the same plate will be glued in superposition between layers of resin to achieve the 3D effect.

After sticking your first stickers make a second pour of resin and like the previous one wait the next day to continue your creation.

There are in all 4 layers of resin.

Which material to use for 3D fish pocket in resin?

SUPPLIES

Crystal'Diamond 150ml Resin for Inclusion casting
Ref. : OUTIL-495
Quantity : 1

Lot of 8 3D effect sheets - Goldfish for accessories and jewelry resin x1
Ref. : TECH-377
Quantity : 1

Lot of 11 3D effect sheets - Foliage for accessories and jewelry resin x1
Ref. : TECH-378
Quantity : 1
