How to create your own resin door handle?

There are all kinds of silicone molds to create everyday decorative items or pieces for costume jewelry. To make your door handle you can use two different molds in the central pattern but having the same shape of pumpkin or pumpkin.

The resin used is a two-component resin already tinted in a beautiful shiny black.

Steps :

-Step 1

Make your resin mixture by putting a dose of hardener for twice the resin. To mix the components well you must transfer your mixture into another cup for safety after mixing with a small stick.

-2nd step

Apply metallic acrylic paint directly to the bottom of the mold, ironing over the relief patterns of the flower, then add small lines or dots on the sides.

-Step 3

Pour the resin in the mold, place a screw in the center of the handle. Use sticks to keep this screw in balance while setting the resin.

-Step 4

Wait 2 or 3 days before unmolding your handle. Try not to put your fingers on the surface of the handle after demolding to avoid fingerprints, wait a few hours before using it and place it on a piece of furniture.

Which material to use for Resin door handle?
