Ref. : TECH-155
Quantity : 1

Padico liquid dye to colour resin Pearl Pink Beige x5ml
Ref. : TECH-702
Quantity : 1

Metal flakes gold x1g
Ref. : TOOL-297
Quantity : 1

steps

★ Step 1/4

Prepare your mixture with two doses of epoxy resin and one dose of hardener, i.e. 60 ml of resin and 30 ml of hardener. Stir the two components with a stick in a cup, add 6 drops of pink dye with golden highlights, the colour should remain very pale. Wait 15 minutes for the bubbles to disappear before using it.

★ Step 2/4

Unroll your light garland, make sure that it is working properly before inserting it into the silicone mould with the letters love.

★ Step 3/4

Pour all the resin into the mould, add a few petals and fragments of gold leaf. The mould is not filled to the rim to avoid overheating when setting the resin, this can happen when pouring a large amount into a mould. This will also allow you to control that the wires do not come out of the mould. Wait until the next day before continuing the filling process.

★ Step 4/4

Mix the two components of the epoxy resin again with the same quantities as the first time, don't forget to add colouring. Wait at least two days, three days is better before unmolding your love lamp.
