How to use a texture plate for Fimo clay?

For Fimo clay and modelling addicts, here's a decorating tutorial ideal for the end of the year, to decorate your home and give it a festive air. This activity can be done with children aged 8 and over. This tutorial is suitable for beginners. Have fun creating your own Christmas decorations with Fimo Air clay. This modeling clay hardens in air. No need to bake! What's more, it's 95% natural substances. Its final appearance is similar to that of clay.

In this DIY, you'll discover how to use a texture plate. Like a stencil, the plate enables you to imprint a pattern on the polymer clay while adding relief to your creations. You'll find a wide choice of texture sheets with a multitude of patterns. These sheets can be molded with all types of polymer clay (Fimo, Cernit, Sculpey, etc.) and Fimo Air clay. Fimo Air is available in a range of colors and effects, from Terracotta to wood and granite.

We'd love to see your version of these angels, so don't hesitate to send us your photos on Facebook, Instagram or at the bottom of this tutorial.
