How to make a Scandinavian style wooden bracelet with geometric patterns?

Follow this DIY tutorial to create a super trendy and ultra simple wooden bracelet inspired by the Danish "Hygge" lifestyle . A comfortable bracelet and "cocooning" to wear without moderation winter or summer. It is also an easy gift idea to adapt to the tastes of each one and which will be a pleasure for sure. Do not hesitate ! Immerse yourself in the Scandinavian universe !

Step 1 :

Use masking tape to prepare the geometric patterns to paint. It must be straight and smooth on the side where you will apply the paint. Pay attention to air bubbles and wrinkles.

2nd step :

For painting, you can either use chalk paint or acrylic paint . For very light pink with acrylic paint, mix white and red. Proceed in this way: Pour a little white in a lid / plastic plate, then add red in very small key and mix. Add a little red if necessary, always in small quantities. When making blends have always poured the darkest color into the lighter color. Beware the acrylic darkens while drying. Take a test on a corner of the plate and let a little dry to see the color obtained.

Step 3:

Paint your bracelet, be careful to paint in the right place and do not overflow. Do not put too much paint on the brush and spread it well on the bracelet to not make "pies". Paint masking tape towards the center of the pattern and not the other way around as the paint may slip under the masking tape. For the golden triangle, apply inca-gold with a brush as for normal paint. You can also use light paint .

Wait until the paint dries between each coat of paint. Place the bracelet at an angle on a support so as not to mark the paint. Do not use more than 3 coats of paint as this will create a thickness when you remove the masking tape.
