Easy

20 minutes

How to make a stainless steel bracelet?

May 29th is Mother's Day. It's the perfect occasion to say I love you and to offer them a very original gift to make this day an unforgettable moment. Nothing is too good for a mom! And as there are still a few days ahead of us, we take the opportunity to create ourselves the jewel that will melt her heart!

In this tutorial, I invite you to make mother daughter bracelets. A duo of almost identical bracelets to share with each other.

To make them, I chose the softness of a mix of moonstone beads, with different colors ranging from white to pink, through brown and gray. But you can choose the gemstones you want according to your taste, according to your and your daughter's birth month, or according to your astrological signs. The gold stainless steel beads are used to separate the beads and add a bright metallic touch. For the sequins and mini charms that make up the two bracelets, they are small shells, round sequins, a daisy flower and a rainbow. But let your imagination run wild: by selecting the jewelry components of your choice, your creations will be even more personalized!

To finish these two matching bracelets, I made a slip knot. This will be the only real technical difficulty in these mother-daughter jewelry pieces. Easy, right? Go ahead and make duo bracelets, very nice gifts for Mother's Day.

Which material to use for Mother's Day DIY: Mother Daughter bracelet in stainless steel and gemstones?
