How to make a ceramic bead necklace?

Ceramic beads are handmade beads that come in different shapes and colors. They can be glazed with beautiful bright colors or colored matte. Each bead is unique, making your necklace a poetic and delicate jewelry creation. Choose the colors of the beads that will compose your necklace to fit your wardrobe.

This necklace is made of ceramic tubes White enameled square beads and turquoise glass beads. Small gold metal rings and beads highlight the color of the beads. The wire used to make this necklace is cabled wire. Wired wire is a wire made with several strands of metal twisted together. It is a strong wire and perfect for using heavy beads, as long as you choose the right size and number of strands for the project.

The more strands the wire has, the more flexible it is, the more resistant it is and the more expensive it is. The best compromise for this model of jewelry is to use 19 strands of wire in 0.46 mm. By using wire protectors and flattening your crush beads with suitable pliers, you will extend the life of your necklace even further. We explain this in this jewelry making information video: What are wire guards?

With this method, you can make a handmade ceramic bead necklace that will last for many years. The necklace is 40 cm long, including the clasp. There will be about 23 cm of faceted glass beads left. You can extend the necklace with these glass beads if the necklace is too small for you. Remember to cut a longer thread at the beginning.

There is nothing left in the material list other than these beads, so if you want to alternate one gold bead for every ten turquoise glass beads, consider buying a second package of ETA-220.

Which material to use for Turquoise blue ceramic tube beads necklace?

SUPPLIES

5X0.7mm Open Jump Rings - European-made -fine Gold plated x50
Ref. : ACC-396
Quantity : 1

Crimp beads 2 mm - European-made - fine Gold plated x50
Ref. : ACC-427
Quantity : 1

Crimp covers 3 mm Gilded with fine 24K x50

Kit of 3 Pliers professional quality for jewelry - Chain nose pliers, Cutting pliers, Round nose pliers
Ref. : OTL-580
Quantity : 1

Crimping pliers x1
Ref. : OUTIL-023
Quantity : 1

steps

★ Step 1/5

Cut 52 cm of wire. Thread a squeeze bead and a wire protector over it. Push the end of the wire back through the squeeze bead. Bring the two ends of the wire guard together by pinching them with your fingers. Extend the end of the wire about 5-6 cm beyond the bead. Squeeze and pull the bead closer to the wire guard. Flatten the bead with a crush bead pliers which will make a fold in the middle of the bead. Then bend the bead in half with the second end of the pliers and finish by squeezing it a little more with the flat end of the pliers. Check that the wire is not slipping anymore and continue to the next step.

★ Step 2/5

Place a crushable bead cover over the crushable bead for a nicer finish. Next, thread 10 glass beads. Both ends of the wire must go through the beads.

★ Step 3/5

Thread one irregular golden bead 5 mm, 10 glass beads, 1 golden bead, 1 white ceramic square, 1 golden bead 5 mm, 5 glass beads, 1 gold bead, 1 blue glazed ceramic tube, 1 gold bead, 3 glass beads, 1 gold flower disc, 1 white ceramic square, 1 white ceramic square, 1 golden roundel, 3 glass beads, 1 golden flower roundel, 1 blue ceramic tube, 1 golden roundel, 1 white square, 1 white square, 1 golden washer, 1 white square, 1 golden washer, 1 white square, 4 golden washers, 1 blue ceramic tube for the middle bead. Then do the reverse to make a symmetrical necklace.

★ Step 4/5

At the end, thread a crush bead and a wire guard. Repeat step 1 but remember to thread the remaining wire end through the beads and tighten the necklace a bit before crushing the bead. Once the finishing touches are made and the bead cover is placed on the necklace, cut off the excess wire.

★ Step 5/5

Add a 5mm open ring on each wire guard with two jewelry clips, then, a 9mm ring on one side and a spring clasp on the other. Your necklace is finished.
