15 minutes

How to make a stainless steel collar

You can't miss this trend: heart jewelry has become a must-have in recent times. So that you too can adopt this trend, we offer you a stainless steel t-clasp necklace. This large-mesh necklace is ultra-quick to make, requiring just two steps. As you can see, it's the ideal tutorial for getting started in DIY jewelry making.

For this gold-plated stainless steel necklace, I chose a T clasp, which you can of course replace with another type of clasp: the [buoy clasp](#) also goes very well with this type of necklace. The same goes for the pendant. With Valentine's Day fast approaching, I was tempted by the hearts trend, but you can choose another pendant. [Birth flowers](#) or [astro signs](#) are perfect if you want to personalize your jewelry. You'll also find plenty of choice in our range of [stainless steel charms](#).

This tutorial is part of the 3rd chapter of our [Precious Moments](#) collection. Feel free to browse the collection, you'll find plenty of other easy-to-make stainless steel jewelry inspirations.

If you reproduce this stainless steel heart necklace, don't hesitate to tag us on social networks. We love to see what you make!

Ref. : CHU-224
Quantity : 1

SUPPLIES

Kit of 3 Pliers professional quality for jewelry - Chain nose pliers, Cutting pliers, Round nose pliers
Ref. : OTL-580
Quantity : 1

steps

★ Step 1/2

Start by choosing the length of chain you want. Here, I've removed 9 links, i.e. about 8 cm.

As the chain is made of stainless steel, it may be a little difficult to open. If you're unfamiliar with this, I suggest you take a look at our data sheet, which explains [how to open large stainless steel links](#).

Then take two open rings to add the clasp to the chain. Here, I've chosen a two-part T-shaped clasp.

★ Step 2/2

You can stop there if you like. For my part, I opted for the heart trend by adding a striped heart pendant. To do this, simply take an open ring and add the heart in the same ring as the clasp.

And voilà, your necklace is already finished!
